<b>Length:</b>	2800mm (from centre to centre of holes)
<b>Mounting Holes Diameter:</b>	9mm diameter (each hole)
<b>Width:</b>	350mm (top to bottom)
<b>Finish:</b>	Hot Dip Galvanized to AS 4680:2006

The Safety Xpress Guardrail system is a safety barrier system designed with driver safety and vehicle containment in mind. Its high visibility gives driver confidence, and should it be needed, vehicles are restrained and redirected to their original roadways.

Our w-beam guardrail system is hot dip galvanised for enduring the tough Australian outdoors whether it be on the never-ending verges of Australian roads or median locations between opposing traffic.

Also suitable for warehouse and factory environments, this safety barrier system creates a confusion free area for pedestrians and vehicles, maintaining a safer environment and allocating clear areas for each user.
